

HLR Solutions provides expert engineering services throughout the project lifecycle for small to medium sized projects. Our highly experienced multidisciplinary engineering team have delivered results for our clients across a range of industries.

Industry range and focus

Industries

- Hydrogen
- Oil & Gas
- Industrial Gases
- Defense
- Transport and Dangerous Goods
- High Pressure Equipment
- Chemical Blending and injection
- Water & Wastewater

Specialist areas of core competency

Capability

- Process Engineering
- Mechanical Engineering
- Electrical Engineering
- Design Drafting
- Modeling and Simulation
- Construction Planning

Trusted solutions and services throughout the project life-cycle

Concept & Scoping

Feasibility Studies

Front End Engineering

Detailed Design

Procurement & Construction Management

Commissioning & Delivery

Automated Machinery

Coal Gas Drainage System

Hydrogen Transfer Module

High Pressure Manifolds

Testing & Commissioning

Terminal Infrastructure

Driven by your requirements – Engineered for your success.

From complex industrial systems to high-performance infrastructure, HLR Solutions has delivered engineering excellence across Queensland. Our team brings hands-on experience in process, mechanical, and electrical engineering across a diverse range of projects, from concept and design through to commissioning and on-site implementation. We are trusted by clients to solve engineering challenges with precision, backed by experienced project management and a deep understanding of site logistics and delivery.
